Profile

AI-focused Software Engineer specializing in agentic AI systems and intelligent message processing. Proven experience building production-ready AI agents using LangGraph, LangChain, MCP, and reflection-based architectures, enabling confidence-aware decision- making. Strong foundation in Java backend engineering, applying robust design specification principles to build scalable and reliable LLM-driven systems. Passionate about implementing modern AI capabilities into real-world enterprise applications with a focus on enterprise security.
Core Capabilities:- Document Parsing & Information Extraction | Generative AI (GenAI) | LLM Orchestration | Semantic Search & Contextual Reasoning | Agentic AI | Entity & Relationship Extraction | Backend API Integration | Information Management | Enterprise AI Systems

Professional Experience

Junior Software Engineer, Cotrafix Technologies Pvt. Ltd Oct 2026 – Present | Panchkula
- Working on a data migration project, moving data from existing systems into a new target database.
- Mapping source and target schemas and writing transformation logic so records stay consistent after the move.
- Validating migrated data with record counts and reconciliation checks to catch missing or duplicate records.
- Finding and fixing data quality issues found during migration runs.

AI Engineer – Agentic AI, Fintek Software Services Pvt. Ltd. Mar 2025 – Sep 2026
- Built AI-based agent systems using Python.
- Enhanced backend modules in Java applications.
- Wrote unit and integration tests to make releases more reliable.
- Implemented Retrieval-Augmented Generation (RAG) pipelines and tuned prompts to improve response quality.

Education

Master of Technology (M.Tech) - (Computer Science and Engineering) Jul 2019 – Jul 2021
Bengal Institute of Technology and Management

Bachelor of Technology (B.Tech) - (Computer Science and Engineering) Jul 2014 – Feb 2019
Bengal Institute of Technology and Management

Courses

Full Stack Java Development , MASAI School Mar 2022 – May 2023

Skills

- **Generative AI & Agentic Systems:** LangGraph, LangChain, MCP, Reflection Agents, Prompt Engineering, Retrieval-Augmented Generation (RAG – conceptual), Semantic Search, Entity Extraction
- **AI/ML Concepts:** LLMs, NLP, Text Understanding, Embeddings (usage-level), Vector Search (conceptual), Retrieval-based Systems
- **Backend & API Engineering:** Python, Java, Spring Boot, REST APIs, Enterprise Backend Integration
- **Databases & Data Modelling:** MySQL, Graph Data Modeling (Knowledge Graph – conceptual)
- **Web Technologies:** JavaScript, HTML, CSS
- **CS Fundamentals:** Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP)

Projects

TFAgent – AI Agent for SWIFT Message Classification

- Designed a graph-based multi-agent workflow for SWIFT message classification and parsing.
- Implemented entry filtering, classification, confidence scoring, and reflection retries.
- Built message-type-specific parsers for structured messages and semantic extraction for unstructured data.
- Added cost, performance, and accuracy monitoring to evaluate system reliability while adhering to technical specifications.
- Applied retrieval-style contextual enrichment to improve accuracy of LLM-driven document understanding.
- Improved SWIFT message classification accuracy by ~20% through confidence-aware reflection loops and prompt optimization.
- **Tech Stack:-** Python | LangGraph | LangChain | MCP | Prompt Engineering | Reflection Agents
